PC Keyboard/VGA Switch

Don't waste money and space on more monitors or computers than you need.

Key Features

- ▶ Control two PCs with one keyboard and monitor.
- ▶ Or let two users with VGA monitors share a single computer.
- ▶ The reset switch handles keyboard errors—without rebooting.

Technically Speaking

- ◆ This switch has 5-pin DIN and high-density 15-pin connectors, so you can use high-resolution VGA monitors with your PC keyboards and any IBM[®] PC, PC/XT[™], AT[®] or compatible computer.

- ◆ Cut equipment costs—a single CPU can serve two users with their own keyboards and monitors, or set a single VGA monitor to switch between two CPUs.

- ◆ You don't have to reboot if a keyboard error freezes your computer. A reset button on the switch resets the keyboard without dumping your application.
