The Source for Connectivity™

pcANYWHERE IV and pcANYWHERE IV/LAN

Get fast, flexible control of a host PC from an off-site PC, a laptop, a terminal, or even a PC across the network.

The pcANYWHERE packages support a variety of software programs and provide password and callback security.

Key Features

- ▶ Gives you full control of a host PC from anywhere.
- ▶ With terminal emulation software on the host PC, lets you access a midrange or mainframe computer too.
- ▶ Supports host PC programs that use graphics mode.
- ▶ Keeps out unauthorized users with password and callback security.
- ▶ Keeps track of who has accessed your machine, with record, playback, and session logging.
- ▶ Easy to use and easy to install, with on-screen menus and context-sensitive help.

Overview

The pcANYWHERE™ software packages give you total remote control over off-site PCs—or across your LAN.

pcANYWHERE IV

This package gives you full control of a host PC from an off-site PC, laptop, or terminal via a standard modem connection. Once you're connected to the PC you want to access, your local screen shows exactly what the remote screen does. pcANYWHERE provides support for many popular software programs, like terminal emulators, word processors, and spreadsheets that use graphic modes.

And it provides advanced security option to keep out prying eyes. A user must have the proper password and be at the phone number associated with that password

in order to access your computer.

You also get remote access to the office midrange or mainframe host, through an office PC running a terminal emulation program.

pcANYWHERE IV/LAN

The LAN version brings the power of pcANYWHERE IV to your local area network.

Add pcANYWHERE IV/LAN to other machines on your network and you get a wide range of possibilities.

You can dial into another PC on the LAN, dial out of your LAN into an isolated laptop, or reach into a PC on a completely different LAN.

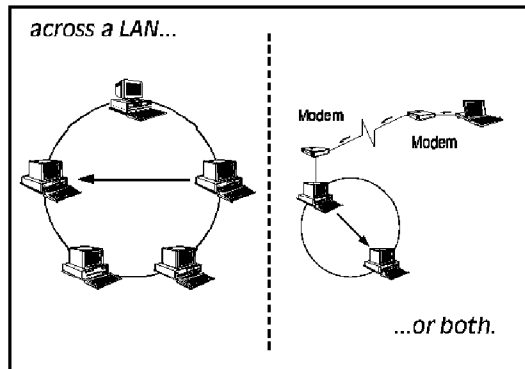

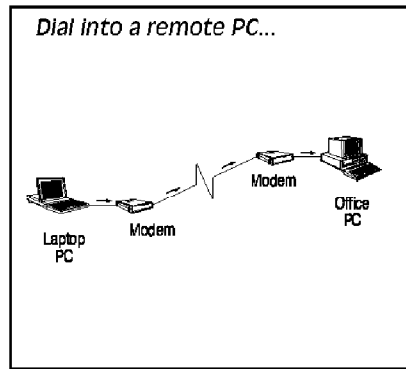

A PC on your LAN with a modem attached can act as a gateway to another PC. In gateway mode, that PC will give you a list of the PCs running pcANYWHERE IV/LAN. Just pick the one you want, and the keyboard under your fingertips becomes the keyboard of the remote PC.

Typical Applications

You need to print out a report on your office printer, but you're at home. Just dial into your PC from home, and print the report.

You need to copy a file from your PC to another PC on the LAN. Just dial into your PC remotely—from anywhere—and transfer it to the other machine's hard drive.

Complete remote control of another PC—no matter what the environment.

Technically Speaking

- ◆ pcANYWHERE™ IV and pcANYWHERE IV/LAN provide both remote computing and access to on-line services. You get both capabilities in one software package.
- ◆ The automated installation function, the clear, intuitive menu-based operation, and context-sensitive help make this package very easy to use.
- ◆ The voice-first connection function lets you have a spoken conversation first, then switch to data without having to redial the number. And a built-in telephone directory can even dial numbers for you.
- ◆ Configure the pcANYWHERE packages to your exact requirements. There's a host of user-selectable features, like session record and playback, call logging, selectable keyboard control modes, host screen disable, simultaneous printing at both host and remote locations, and multilevel password protection.

Accessories to get the most out of pcANYWHERE

- ◆ For remote control of another PC, you need high-speed modems. Try our Modem 3242-XB (MD277A). It supports speeds up to 9600 bps.
- ◆ Need small size or portability in your data communications? Try our Modem 325 Card (MD278C). It fits into a PC or laptop and supports speeds up to 38.4 Kbps.

What you get when you order a pcANYWHERE package.

- pcANYWHERE IV (5.25"): (4) Diskettes, user's manual
- pcANYWHERE IV (3.5"): (2) Diskettes, user's manual
- pcANYWHERE IV/LAN: (4) 5.25" or (2) 3.5" Diskettes, manual
