Voice Conferencing System

Now make conference calls with CD-quality sound and clarity.

Key Features

- ▶ Picks up normal voices up to 15 feet away.
- ▶ Full-duplex operation—interruptions can't drown you out.
- ▶ Full 360-degree room coverage.
- ▶ Top-quality 16-bit codec produces the highest sampling precision possible.

You don't lose a word during a conference call! This new, stylish system provides full-duplex operation, where no voice path is ever closed.

Other conference telephones and speaker-phones use switching devices that close the microphone input when the speaker circuit is activated. A voice or even background noise on the other end of the line can cancel you in mid-sentence and you won't even know it.

Voice Conferencing System offers true, full-duplex operation. No voice path—incoming or outgoing—is ever closed.

Technically Speaking

Automatic Gain Control (AGC) extends coverage to your entire conference room. It detects normal voices up to 15 feet away. So everyone can speak calmly and naturally, without "talking over" anyone else.

The Voice Conferencing

System's 16-bit codec is the same sound sampling technology you'd get in a high-quality CD player. The result is a more accurate, life-like sound quality that can't be achieved with the 8- and 12-bit codecs used by other conference telephones. With CD-quality sound, Voice Conferencing System sounds like a face-to-face meeting.

Installation of the System is fast and easy. Just plug it in exactly like a single-line telephone.

Specifications

Speaker Volume—Adjustable up to 90 dB max.

Power—115 VAC, 60 Hz, 6 W, external supply

Audio Bandwidth—280 to 3400 Hz

Size—3"H x 13"W (7.6 x 33 cm)

Connectors—Standard 2-wire RJ-11 telco jack

Weight—5.1 lb. (2.3 kg)
